

Wide Platform Assembly Instructions **£25**

This kit makes up into a model of a sleeper built railway platform. The design is modular and this kit can either make a single deep platform or can be joined to other platform kits in our range to make a larger platform.

We recommend using water proof PVA woodworking glue (e.g. Evo-stik Resin “W” in the blue bottles) for this kit. Even though the kit has been cut from exterior quality plywood, we recommend regularly treating the completed kit with a spirit based wood preserver or creosote substitute.

Alternatively use 1 or 2 of the supplied connector plates if you want to fix another wide or narrow platform kit to this one.
